Very good information, well presentedBy Ian McInerneyVery good information, well presented, with high quality paper format, presented in a logical way. A lot of effort had gone into the research on the subject. These publications are well worth the price. Crecy have never disappointed me on the quality of these type of publications3 of 4 people found the following review helpful. Excellent Resource on the Ju-88By Lars P. HansonYet another excellent book in this series by Classic Books. For those interested in German aircraft of World War II, this is well worth the investment. Both Volume One and Volume Two on the Junkers Ju-88

are excellent. The early chapters of Volume One detail the evolution of the design and also of the Junkers manufacturer, and the later chapters provide excellent descriptions of the life of these aircraft in the same vein as other books in the series. The technical details are outstanding, and the line drawings and photographs are sharp and clear. The well written text along with numerous photographs and drawings make this a superb resource. 2 of 3 people found the following review helpful. Excellent summary of the development

By Customer
This well-produced and heavily-illustrated book is an excellent summary of the Ju-88 family development. The author's perspective was also valuable and offered insights I've not seen in other books on this aircraft. Highly recommended!

This exciting book is the first in a comprehensive two-part study of the development and operational history of the Junkers Ju 88, exploring the many facets of this famous and long-serving aircraft. Its variants, including the Ju 188 and Ju 288 are also covered, along with the wide array of armament and equipment with which it was fitted, and its various markings and camouflage schemes. The text is illustrated with several hundred rare photographs, manufacturer's handbook data, scale line drawings, and specially commissioned color artwork.

"In just a few words: this book is excellent!" (Pablo Bauleo IPMS/USA 2015-04-03)"A fantastic introduction... Highly recommended!" (David L. Veres Cybermodeler 2013-08-01)

About the Author
William A. Medcalf was born in Monmouth, Illinois. His interest in aviation began when he was a schoolboy during World War Two and continued with weekly visits to local airfields. He became a pilot at the age of 16. He has continued flying for almost 60 years (propeller-driven aircraft, jets and gliders). Medcalf is the author of numerous technical documents, most unpublished as they were either classified by the US military or internal confidential documents. His hobbies include flying, aviation history, automobile racing, and scale aircraft modeling.
